

Resume

Backend Engineer specialized in **Fintech and payment infrastructures**, with over **5 years of experience** designing and operating **high-volume payment platforms** (B2B transfers, mass payments, mobile money integrations).

Ruby on Rails expert focused on building **reliable, auditable, and resilient financial systems**, ensuring the integrity of monetary flows through **idempotency mechanisms, ACID transactions, and retry strategies**.

I have built and operated platforms used by **NGOs, enterprises, and fintech companies**, processing **10,000+ transactions per month**, with strong requirements for **performance, security, and PCI DSS compliance**.

Passionate about **robust and scalable payment infrastructure**, with particular interest in **transaction reliability and large-scale fintech architectures**.

Experiences

Backend Engineer & Lead Développeur | iFutur | Niger | 2025 - Aujourd'hui

I-Money: *Multi-service platform (payments, transfers, bills, subscriptions)*

- Designed a **modular backend architecture** supporting payments, money transfers, billing, and subscription management.
- Managed and optimized a platform serving **thousands of active users**, with a strong focus on **scalability, security, and transaction reliability**.
- Developed a **partner integration abstraction service (Imoney Tracking)** that reduced integration time by **40%** and standardized API interactions.
- Designed and exposed **secure backend APIs** consumed by the mobile application, ensuring consistent and performant transaction flows.
- Implemented **rate limiting and endpoint protection** to prevent abuse and secure sensitive operations.
- Modeled the **full transaction lifecycle** (initiation, validation, execution, confirmation) with **real-time webhook notifications**.
- Built a **Complaint Management System** for tracking customer issues and analyzing related transactions.
- Developed **internal financial reconciliation tools** comparing internal transactions with operator records to detect discrepancies.
- Implemented **feature flags** for progressive deployment and version control of new features.
- Collaborated closely with the **mobile development team** to ensure seamless API integration.
- Monitored and optimized **SQL queries for critical transactions** to improve performance and reliability.

Backend Engineer | i-Futur | Niger | 2024 - 2025

I-Pay Money: *B2B transfer platform for NGOs and enterprises*

- Implemented **payment by link and QR code**, enabling fast and secure transactions.
- Designed and exposed **secure APIs** for partner integrations and client interfaces.
- Implemented **advanced security mechanisms** including:
 - Device tracking
 - Protection against user enumeration
 - Reinforced authentication for sensitive operations
- Implemented **logging and monitoring tools** to track critical transactions and detect anomalies.
- Optimized **critical SQL queries and indexing strategies**, reducing processing time for sensitive operations from **45s to 15s**.
- Developed **internal administration tools** for account management, transaction tracking, and operational support.
- Participated in **technical architecture design and technology decisions**.
- Mentored **3 junior developers**, including code reviews and backend best practices.
- Collaborated with **product and operations teams** to align NGO and enterprise needs with technical solutions.

Backend Engineer & Lead Développeur | iFutur | Niger | 2023- 2024

Cash Transfert: *B2B transfer platform for NGOs and enterprises.*

- Led the **design and integration of B2B payment and transfer systems**, ensuring reliability and scalability of financial flows.
- Developed **WooCommerce extensions and JavaScript scripts** to integrate payment systems into client e-commerce websites.
- Designed a **theoretical vs real balance validation system** ensuring reliable financial reconciliation before debits.
- Built **resilient architecture for high transaction volumes**, including **retry mechanisms and dead letter queues**.
- Implemented **ACID transactions and idempotency keys**, guaranteeing **zero duplicate payments**.
- Created **Metabase dashboards and Slack alerts** for real-time monitoring and anomaly detection.
- Designed an **Excel template for mass payments**, with automated tracking and reporting.
- Ensured **PCI DSS compliance** and maintained audit logs for security and traceability.

API Integration Engineer | iFutur | Niger | Juillet 2022 - December 2022

Responsible for **partner API integrations and standardization** across fintech platforms.

- Acted as **technical point of contact with partners** for API specifications, endpoints, and transaction flows.
- Performed **integration testing in sandbox environments**, validating transaction scenarios and webhooks before production release.
- Implemented and validated **API security mechanisms** (request signatures, authentication, access control).
- Managed **API error scenarios** (timeouts, partner errors, retries) to ensure financial flow reliability.
- Reviewed partner API specifications and **proposed technical improvements** to optimize integrations.
- Wrote **standardized technical documentation** (endpoints, payloads, errors, workflows).
- Monitored pilot integrations and resolved **technical incidents related to API calls and transactions**.

Competences

Langages : Ruby, PHP, JavaScript, SQL

Frameworks & Web : Ruby on Rails, Node.js, Vue.js, APIs REST, Webhooks

Payment Systems: Payment APIs, Mobile Money integrations, Mass payments, Payment links, QR code payments

Transaction Reliability : Transactions ACID, clés d'idempotence, stratégies de retry, Dead Letter Queues

Databases : PostgreSQL, MySQL, conception de bases, optimisation SQL, indexation

Infrastructure & DevOps : Heroku, Render, OVH, Dokku, jobs asynchrones, feature flags

Sécurité : Rate limiting, authentication API, signature des requêtes, device tracking, bonnes pratiques PCI DSS

Monitoring & Tools : Metabase, alertes Slack, logging, observabilité, Git, GitHub

Education

Diplôme de Brevet de Technicien Supérieur (BTS)

Option : **Télécommunications et Réseaux Informatiques**

À l'Institut Africain de Technologie (I.A.T)

2021 - 2022

Baccalauréat (BAC)

Au Collège Mariama à Niamey, Niger.

2017 - 2018
